

Subject: Application for Senior Java Software Engineer – Adrian Vrabie

Dear Sygnum Bank Hiring Team,

I am writing to express my strong interest in the Senior Java Software Engineer position. With over a decade of experience designing and building scalable backend services in regulated environments—most recently at UBS—I am excited to contribute to Sygnum’s robust, production-grade platform built on Java and AWS.

Your tech stack resonates deeply with my expertise and philosophy. I am passionate about **Spring Boot** and **Project Reactor**, and I firmly believe reactive, non-blocking architectures are essential for building high-performance, resource-efficient backend services. This philosophy has guided my work on multiple microservices at UBS, including a WebFlux-based Facade Service handling document ingestion during the Credit Suisse migration, and the NSCDA service where I leveraged Project Reactor Sinks for complex event-driven workflows.

I bring direct production experience with the exact technologies you need: - **PostgreSQL & RDBMS:** Designed and maintained data models in Oracle and PostgreSQL across multiple high-throughput services - **Kafka:** Experienced with event-driven architectures for asynchronous, scalable systems - **Redis:** Leveraged reactive Redis in my Horus Gateway project for distributed session management and real-time analytics - **REST API Design:** Built API-first services with OpenAPI/Swagger throughout my career, prioritizing clarity and security - **AWS & Containerization:** Solid experience migrating systems to cloud (Azure, PCF), with deep hands-on expertise in Docker and Kubernetes

Beyond technical depth, I take ownership of the full SDLC—from architecture and design through production operation. I prioritize quality and security by default: SOLID principles, extensive unit testing, CI/CD discipline, and security-first thinking (OAuth2, mTLS, secrets management). I am proactive, collaborative, and genuinely energized by complex technical challenges in distributed systems.

I would welcome the opportunity to discuss how my experience building scalable, secure, and well-engineered backend services aligns with your team’s needs.

Thank you for your consideration.

Best regards,

Adrian Vrabie +41 762575204 mr.vrabie@gmail.com <https://blog.s4v3r.net>
