

Subject: Application for Senior Software Engineer – Adrian Vrabie

Dear Julius Baer Hiring Team,

I am writing to apply for a Senior Software Engineer role at Julius Baer. My background combines a Master's in Mathematics with over a decade of engineering experience, focused on building distributed systems that deliver measurable performance improvements in regulated environments.

At UBS, I led and delivered Spring Boot services that improved performance and reliability of document delivery across the bank. I successfully deployed production-grade applications integrated with Apigee and OAuth2 Resource Servers, built with non-blocking capabilities to serve documents from the archive efficiently at scale. This work required tight alignment with security standards, consistent latency under load, and operational resilience in a global banking environment.

Earlier in my career, I co-pioneered an SD-WAN product for Comcast, taking a research concept through POC to a commercial product used worldwide. This experience strengthened my ability to translate complex requirements into scalable architectures and to deliver end-to-end results.

I would welcome the opportunity to bring this experience to Julius Baer and contribute to building reliable, high-performance systems for the bank's clients and teams.

Thank you for your time and consideration.

Best regards,

Adrian Vrabie
